#### DETAILED ACTION

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hopkinson et al. (USPN 6746988; 6/8/04). Hopkinson et al. teach an agricultural composition comprising an agriculturally active compound and an anionic surfactant. The agricultural composition may comprise a nonionic surfactant. See abstract. The anionic surfactant can be SOPROPHOR 3 D 33 (column 1 line 66 - column 2 line 8) which has a HLB value ranging from 14 to 18. The composition can exist in the form of a flowable concentrate, suspoemulsion, water in oil emulsion (column 2 lines 9-33). The composition can further comprise adjuvants (column 2 line 34-40) and a nonionic surfactant (column 2 lines 46-53) such as ethylene oxide-propylene oxide copolymers (column 7 lines 4-28). The agricultural active compound can be a nematicide or an insecticide (column 7 lines 37-51). The insecticide can be abamectin (column 8 lines 11-36). The composition can be applied to plants and their seeds (column 10 line 62column 11 line 6). Hopkinson et al. do not exemplify an invention comprising abamectin, Soprophor 3D33 and block polymer. However, Hopkinson et al. do suggest the composition of ingredients making the claimed invention obvious. Hopkinson et al. do not teach the instant ratios, amounts and molecular weight of the ingredient(s). An

artisan in the field would have been expected to determine the optimum ratios, amounts and molecular weight for the ingredient(s). One would have been motivated to do this in order to develop an invention that would have been most effective in controlling insects on plants without destroying the plants.

### Election Status

The elected invention comprising abamectin, Soprophor 3D33 and a block copolymer is not allowable.

# Telephonic Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALTON N. PRYOR whose telephone number is (571)272-0621. The examiner can normally be reached on 8:00 a.m. - 4:30 p.m..
